## Appended Form 1

## Specifications for Major Program

Name of School (Program) [School of Science (Department of Mathematics)]

I	Program name (Japanese)	数学プログラム
	(English)	Mathmatics
1.	Degree to be obtained: E	Bachelor of Science

## 2. Overview

Among the fields of science, mathematics is the subject for which standardization and systematization are the most advanced. The Mathematics Program at Hiroshima University mainly aims to educate students to understand and rigorously learn the essence of basic theories in the fields of modern mathematics such as algebra, geometry, and analysis. Through this process, students develop an in-depth ability to comprehend complex phenomena from a mathematical point of view in order to generalize, abstract, systematize, and model these phenomena. Students are also enabled to improve their abilities in logical thinking and representation in order to establish a foundation for their future. The abilities described above are required for identifying, formulating, and solving the various problems that appear in all areas of society. We also aim to educate students through carefully supervised independent study in order to produce professionals who are capable of making autonomous decisions based on concrete evidence and able to work in various fields while adapting to change and newly-emerging factors. We hope to create researchers who will contribute to the evolution of mathematical science in the future, educators who understand the essence and academic meaning of modern science, and profe8 Tm [( (i) o)k-in the Graduate School of Science.

Subjects are arranged clearly and hierarchically into liberal arts subjects and specialized education subjects (specialized basic subjects and specialized subjects). Globally standardized lessons are provided for specialized basic subjects and specialized subjects in which lectures are supported by exercise sessions. Therefore, achievement in this program is considered to be an achievement of the global standard. In the 3rd year, lessons that enable students to acquire the knowledge and skills required for exploring the cutting edge of the field that they have chosen will be provided. Because of these lessons, students will be able comprehend and enjoy specialized lectures in the Department of Mathematics and benefit from a bachelor's course in which a great deal of importance is given to the continuity of education from the undergraduate school to the graduate school.

Since Mathematics is a common language in the fields of natural science, this program gives consideration to the fact that students may advance to various fields in science after obtaining their mathematics degree. Specialized

fundamental subjects from other programs in the School of Science are accepted as part of the credit required for graduation.

This program also provides courses to meet the requirements of students who wish to obtain certification as Mathematics teachers for junior and senior high school, as well as the teaching license for Information Sciences for senior high schools. Furthermore, students who obtain a master's degree are permitted to obtain specialized certification for Mathematics teachers of junior and senior high schools.

3. Diploma policy (policy for awarding degrees and goal of the program)

Based on the aims above, this program will award the degree of Bachelor of Science to students who, in addition to earning the required number of credits, have acquired the capabilities described below:

- · The ability to think and make decisions from a wide-ranging perspective
- The ability to understand the essence of basic theories in the various fields of modern mathematics and how to apply those theories
- · The ability to think and express oneself logically
- The ability to comprehend various phenomena from a mathematical point of view in order to generalize, abstract, systematize, model, and process them
- The basic skills and advanced knowledge required for advanced study and research in the graduate school or for actively working in various fields such as education and industry.

## 4. Curriculum policy (policy for organizing and implementing the curriculum)

To achieve the targets listed in the diploma policy, this program organizes and implements a curriculum according to the following policies:

- In the first year, students develop a wide range of knowledge in areas such as the humanities, social and natural sciences, information science, peace studies, and foreign languages. In addition to this, students acquire fundamental knowledge and skills through courses such as An Introduction to Mathematics, Linear Algebra and Calculus. Also, focus will be given to obtaining the right attitude for collaborating with others through presentations and discussion in the course Liberal Arts Subject Seminars.
- In the second year, students study the essence of fundamental theories in the various fields of modern mathematics through specialized fundamental subjects related to algebra, analysis, and the fundamental concepts of mathematics. This is done in order to establish basic mathematical capabilities (for conceptual understanding, calculation, and demonstration) and to improve their ability to think logically and express themselves through the exercise courses. In subjects related to topics such as mathematics for computation and probability and statistics, students study processing methods that model and/or systematize various phenomena and analysis methods using computers.
- In the third year, elective subjects that consist of generalized and abstract content in fields such as algebra, geometry, analysis, probability and statistics, and applied mathematics are provided to encourage students to study autonomously and acquire the knowledge required for success at the cutting edge in each field.
- In the fourth year, while taking into consideration the possibility of proceeding to the graduate school, students receive instruction on cutting-edge developments in the field they have chosen in order to improve their ability to

identify and solve problems, think logically, give presentations and be more creative. Academic achievement is evaluated based on grades/scores and performance.

5. Start time and acceptance conditions

In the School of Science, each department holds entrance examinations and stipulates the requirement for admission to the department in its application guidelines. This program is designed mainly for students of the Department of Mathematics. Students will take this program when they enter our department.

This program also accepts all students who have already been accepted to this university. Requirements for students who wish to join the Department of Mathematics are stipulated separately based on the provisions regarding transfer between schools or departments.

6. Obtainable qualifications

Type 1 license for junior high school Mathematics teachers. Type 1 license for senior high school Mathematics or Information Science teachers, Curator license, certification for Assistant Registered Surveyors, qualification for joining the Skill Training course for health controllers in Health Engineering.

7. Class subjects and their contents

\* For the class subjects, refer to the subject table in Attachment 1.

\* For the details of the class subjects, refer to the syllabus that is published for each academic year.

8. Academic achievement

The evaluation criteria are specified for each academic achievement item, and the achievement level against these criteria is given at the end of the semester.

The evaluation score for each item is converted to a numerical value (S = 4, A = 3, B = 2, and C = 1), and the evaluation standard for academic achievement from the time the student entered the university to the end of the last semester is determined by using these values. The evaluation standards consist of three levels, i.e. Excellent, Very Good, and Good.

Evaluation of academic	Converted
achievement	value
S (90 or more points)	4
A (80 – 89 points)	3
B (70 – 79 points)	2
C (60 – 69 points)	1

Evaluation
criteria
3.00 - 4.00
2.00 - 2.99
1.00 – 1.99

\* Refer to the relationship between evaluation items and evaluation criteria described in Attachment 2.

\* Refer to the relationship between evaluation items and class subjects described in Attachment 3.

\* Refer to the curriculum map in Attachment 4.

A booklet entitled "After Completing Lectures" is delivered to faculty members and students after the semester ends to notify them about any updated information concerning course curriculum.
