The Graduate School of Humanities and Social Sciences aims to create and propose new values and knowledge that can be used as the guideline for the society of the future. This concerns the realization of sustainable development and peace for human beings and societies - that is to say, for example, the policy that indicates what we should do with scientific technology rather than what we can do with it.

In addition to that, the education must fulfill a significant role for achieving the goal of “realizing a free and peaceful international society that fosters diversity” which is represented in “SPLENDOR PLAN 2017,” the new long-term vision for Hiroshima University. Hiroshima University has produced a lot of specialists and practitioners, not only in the fields of school education but also in home and social education in an area ranging from preschool education to higher education. In addition to the contributions in Japan, Hiroshima University has widely contributed towards

the development of human resources in areas of education development and education in Asian and African countries.

Based on such a background, to allow Hiroshima University to contribute for construction of world peace, this graduate school also aims to be engaged in education in the levels from primary to higher education as the basis for sustainability in Japan and abroad. This graduate school has two missions, i.e. the science exploration in various fields that contributes to human beings and societies and the construction of a sustainable and peaceful world through education. And this graduate school aims to develop human resources who have profound intelligence regarding human beings and societies and a strong interest for fields outside of their specialties and are capable of cooperating with specialists of other fields, including natural science and life science, to create the human society of the future.
